## LOI (Letter of Intent)

18<sup>th</sup> February 2017

### Waste Valorization Technologies

Recontec - Recovery & Conversion Technology GmbH (Recontec) intends to bring together German Best Available Technologies (BAT) like MYT® (Maximum Yield Technology) with the local financing entity NADIMIRAN to ensure sustainable mutual waste valorization projects in the Islamic Republic of Iran.

The projects will be mainly executed as BOT and include the treatment and conversion of hospital and industrial waste in addition to Municipal Solid Waste (MSW) with state of the art technologies.

Recontec intends to support technology transfer and foresees the local production of various components of the future waste treatment facilities executed by the local industry, which can meet the high-quality specifications necessary for a long lifetime of the facilities.

Bettina Löwentraut-Duran  
Managing Director
